

Name → Julian

Demographics and Background → Julian is a 23 year old Chemistry TA at a University. She is a TA in 3 courses per semester and all 3 are of different levels. Julian have always been using physical board to write in the class but she is also very lazy and doesn't like to go to the board and write. Her friend suggested her to use an iPad to write notes and project them on the screen. Julian is not a very tech-savvy person. Julian also has a ^{bad} habit of forgetting her things at home. Julian is also a student herself.

Goals and Needs → Julian wants to produce the best learning experience for ^{other} students, meanwhile reducing the amount of physical effort she has to put in a class. She also wants the notes to be available even

if she forgets her device at home and can use the class computer^{or another iPad}. As she is new to this technology she wants the app to be beginner friendly, she would also want the notes to be easily shared with the students, without her having to send them individually or through email.

Motivations → Increase her ratings as a Teaching Assistant. Have ease of access to her notes. Create a good learning experience for the students.

Experience with Technology → Julian is new to notetaking technologies on a touch device with a stylus but she has an iPhone already and have a little experience. However, being a chemistry TA she is

good with sketching and making
diagrams and might not have much
problem with using a stylus.
