

## [Task ① / Lilian]

Task Name → Importing Notes from course website and start writing on them.

Persona → Lilian

Importance and Frequency → more important and more frequent.

This is an important feature of the app since Lilian would frequently download the slides from course website and would frequently write her notes in those slides make it easy for her review the material during exams.

Description → Lilian wants to easily import the notes from the website, so that the slides or the professors' notes appear on her notary apps interface and can add pages between the slides or start writing on the notes

themselves

Constraints and Goals →

Constraints → Her device should be able to connect to the web

Goals → Lillian wants to create notes that have all the information that Professor speaks in a class.

Task ② / [Lillian]

Task Name → Open two files on the same screen.

Persona → Lillian

Importance and Frequency → Lillian often compares her notes with her friends as well as take part in group study sessions. Hence she would want to open another file alongside her notes that she can

compare with . This also an important and frequent task for lillian.

Description → lillian's friends can share their notes with her maybe through the app or through email and she can then open another file side by side her notes and compare, this way she can add things to her notes that she might have missed during the lecture.

Constraints and goals →

Constraints → Have some sort of notary account if she wants to share the notes in the app only

Goals → Gather as much information possible from a lecture.

## Task 3 [Julian]

Task Name → Upload notes to a cloud location that can be accessed later

Persona → Julian

Importance and Frequency → This an important task for Julian as she wants to be able to access her notes even she forgets her iPad but is less frequent as she only forgets her device sometimes

Description → Julian wants her notary app to be connected to a cloud storage in the so that she can quickly sign in to other device and access her notes in the TA session, she can use this feature on any other device

with the notary app.

Constraints and goals →

Constraints → She would need to have a notary account

Goals → Make it easy for her to conduct TA sessions.

Task 4 [Julian]

Task Name → Generate standard images or signs from a certain subject

Persona → Julian

Importance and Frequency → This an important and a frequent feature that Julian would want to use since she is lazy and would want the common chemistry diagrams like molecular structures to be

easy to generate and would frequently use this since diagrams are important part of chemistry.

Description → Julian could touch one button that could list different subjects and choose chemistry from them and then further choose already prepare chemical structures or diagrams that can instantly appear her notes without her having to draw them everytime.

Constraints and Goals →

Constraints → A possible constraint could be her knowledge of the diagrams  
Goals → Save her time and effort when frequently drawing diagrams

## Task 5 [Julian]

Task Name → Search a key word through all the notes and find a certain topic.

Persona → Julian

Importance and Frequency → Important and less frequent.

This is an important feature since if a student asks a doubt from her she can quickly search for the topic and clear the doubt, however is less frequent as Julian is good at her subject and remembers most information.

Description → Julian can type a certain key word into a

searchfield that will then list out all the possible matches found in her previous notes. Currently she has to rely on her memory which could be misleading sometimes. She can quickly show a topic without her having write it down again.

Constraint and goals →

Constraints → The notes should be available already on her device to be able to search from.

Goals → Quickly present information to a certain topic
