Name > Julian Demographics and Dackground -> Vulian is a 23 year old Chemistry TA at a university. She is a TA in 3 courses per semester and all 3 are of different levels. Julian have always been using physical board to write in the class but she is also very lazy and doesn't like to got a the board and write. Her friend suggested has to use an ilad to write notion on the screen. Julian is not a very tech-savvy person. Julian also has a habit of forgetting her things at home. Julian is also a student herself.

Gods and Needs - Julian wants to produce the best learning experience fon the students mean while reducing the amount of physical effort she has to put in a class. She also wants the notes to be available even if she forgets her device at home and can use the class computer. Its she is new to this technology she wants the app to be beginner friendly. She would also went the notes to be easily shared with the students, without her having to send them individually or through email.

Motivations > In crease her tratings as a Teaching Assistant Have case of access to her notes. Create a good learning experience for the students.

Experience with Technology -> Julian is new to note-taking technologies on a touch device with a stylus but She has an iPhone already and have a little experience. However, being a chemistry TA she is

good with sketching and making diagrams and might not have much problem with using a stylus.
